The modern hospital ward is full of tubes and wires, used to administrate medication, fluids and blood.

Healthcare professionals who has worked in hospital wards are familiar with the problems these wires may lead to; such as kinking, and being pulled out from the patient, causing increasing risk of wrong management of medications, injuries, pain or discomfort the patient.

INORA now provides a patented solution for this problem; The wire and tube collector ORIO

Orio provides a unique solution to these problems. It can be attached to poles, bed posts, AGA rails and almost any other form of equipment that surrounds the patient. Orio will function as a collection point for all of the tubes and wires going to and from patients.

Orio provides you better control and order in the wire chaos. Tubes and wires are very easily snapped on and released, and you can easily take any desired wire in and out of the product.

1. IV POLE / LAMP / AGA RAIL

2. IV POLE / LAMP
